For the first six months of fiscal year 2005, Groupe Sporever posted consolidated revenues of K€ 4 721, up 5,6% compared to the same period last year. It is worth noting that internet and wireless revenues are up 25% and now represent 41,5% of total consolidated revenues at the end of June 2005 (versus 35% at the end of 2004).

As it was the case in 2004, the Company's business faces a significant impact of seasonality. Everything points to the fact that a stronger growth rate will be reported during the second half of the year.

EBIT is up 61%. EBIT margin reaches 8,5%, which reflects the Company's increased profitability. Net earnings encompass various exceptional items : these exceptional items are income (due to the sale of shares in radio network Sport FM) as well as charges (cost of I.P.O. and legal restructuring prior to the I.P.O.).

### Outlook

Several projects are being carried out in all of the Company's business segments, including the discussion over potential acquisition targets. These projects will enhance the Company's rapid growth. However, it is premature to point out as to when such transactions could be finalized and to what extent they should impact the Company's growth rate. This being said, current revenues on the book and actual profitability levels make the Company confident that its financial goals set forth during its I.P.O. will be met. In today's environment, the Company confirms that it should report double digit revenue growth and consolidated revenues around 11 M€.
